

DWA_04.3 Knowledge Check_DWA4

1. Select three rules from the Airbnb Style Guide that you find **useful** and explain why.

- "Use const for all of your references; avoid using var."- this is useful because it helps with variable scoping and reduces the risk of accidentally reassigning variables. Const and let are block scoped(only accessible within the block of scope where it is declared) and var is function scoped(can be accessed anywhere within the function that it is declared).
 - "Disallow unused variables"- this can cause unnecessary complexity in the code by increasing its length.
 - "Use template strings instead of concatenation for string building."- this makes the code more readable and avoids syntax errors
-

2. Select three rules from the Airbnb Style Guide that you find **confusing** and explain why.

- "Never declare a function in a non-function block (`if`, `while`, etc). Assign the function to a variable instead." - I am not sure why this is done. It seems like it would be confusing to a beginner.
 - And do not export directly from an import.- I am confused about why the one line is not a better way of doing this.
