# DWA_08 Discussion Questions

In this module you will continue with your "Book Connect" codebase, and further iterate on your abstractions. You will be required to create an encapsulated abstraction of the book preview by means of a single factory function. If you are up for it you can also encapsulate other aspects of the app into their own abstractions.

To prepare for your session with your coach, please answer the following questions. Then download this document as a PDF and include it in the repository with your code.

_____

1. What parts of encapsulating your logic were easy?
I had already created the createBookItem function with some abstraction in the previous submissions, so it made it easier to work with and adjust.

_____

2. What parts of encapsulating your logic were hard?
I found it hard to understand how to use factory functions, initially. But after some research and trial and error, I was able to figure out how to use it in my code.

_____

3. Is abstracting the book preview a good or bad idea? Why?
A good idea. It made the code easier to understand and created reusable code that reduced complexity.

_____
